Errors Again Help Barrington Bears Lose to Bartlett; Score 6 to 1

"Gus" Altenburg Is Given No Support in Game Sunday

West Side Fans of Chicago Will Play Return Game Here Sunday

The Barrington Bears lost another ball game Sunday and did it in identically the same fashion by which all the other defeats have been made this year. A generous amount of errors proved sufficient for Bartlett to score six runs against Barrington's one run in the contest played at Bartlett Sunday afternoon.

"Gus" Altenburg was the starting pitcher for Barrington and an error by McCarthy, local third baseman, resulted in a run being scored in the first inning. Bartlett picked up two more runs in the third inning on three hits and one error. A run in the fourth on a single and double and two more tallies in the sixth on one hit and two errors brought Bartlett's run total for the day to six.

Bakwe relieved Altenburg on the mound in the seventh inning and struck out three batters and didn't allow a hit or walk during his stretch. Altenburg was tapped for seven hits, gave up one walk, struck out nobody, six runs were scored and five errors were made behind him.

H. Storm buried for Bartlett for seven innings and allowed three hits, struck out four, walked one man, one run scored and there were three errors made by his teammates. Faber came in to pitch at the start of the eighth and was knocked for one hit, a walk, struck out three batters and one error was committed.

Barrington's sole run came in the fourth inning and was manufactured by the two Johnson brothers, Peter and Donald. Pete opened the inning with a single and moved to second on an error by the first baseman. He then tried for home on his brother's single to left field by was cut down at the plate, Donald taking second on the play.

The run was brought into scoring position when Johnson took third while Hagerty was being tossed out at first base. Don came home a few minutes later on a passed ball.

Sunday's line-ups

Barrington, 1—	AB	R	H
McCarthy, 3b	4	0	1
J. Johnson, lf	4	1	0
D. Johnson, rf	4	1	1
Haggard, ss	4	0	0

YOUR FARM COLUMN

By BILL RUSK

Howdy, farm friends!—In introducing this column we want you to know that we take this means of being of service to farmers wherever these notes are read. We propose to give you dependable farm news, and helpful farm facts. Your suggestions and news contributions will be gratefully received. Write us about how you succeeded with some farm undertaking so we can pass it on to others. Our motto is:

"It pays to think of others.
It will all come back to you
If you give the other fellow credit due."

As Dad would say:

"It's after all the Friendly way
That in the end we find to pay.
Life's worth the while if in the end,
Each has the other for a Friend."

So from the start let's be friendly. If we can be of service by way of giving news and calling attention to important and timely facts that help make for better farming and fuller farm life, we will be glad. We shall appreciate your kindly cooperation and the sympathetic reading of these notes.

Are you well grounded? A fertile soil is our only sure foundation. The wealth of our nation lies in her soil and the strength and lasting qualities of this good old U.S.A. depends a lot upon the intelligent development of this greatest of all heritages—fertile soil.

Pigs is still pigs and they are still "mortgage lifters." Along with the hen and the cow, the pig completes a dependable trio—especially if your bins and mows are filled with home grown feeds and these are balanced with reliable concentrates. E. T. Robbins, livestock extension specialist of the University of Illinois, says that we can increase the rate of gain, save some grain and one half of the protein supplement, cheapen the cost of gain and accordingly increase profits by including plenty of good green leafy pasture in the pig feeding program.

The 1200 stockmen and farmers from all over the state who are expected to attend the 12th annual cattle feeders' meeting August 25 at the University of Illinois will see 14 lots of experimental cattle, nine of them fattened in dry lots and the other five on pasture.

The morning program, as announced this week by Roscoe R. Snapp, associate professor of beef cattle husbandry, includes a trip over the pastures and through the dry lots to observe the cattle on feed and the systems used in the experiments.

Market prices of seven of the experimental lots will be set early in the day by a committee of packers and buyers and commission men from East St. Louis and Chicago stockyards. Financial results of the experiments will be calculated on the basis of the week's market, taking into consideration the animal's weight and amount of feed used.

The afternoon program will be conducted cooperatively by the cattlemen and Chicago meat packers and will emphasize certain vital problems of Illinois cattlemen.

H. P. Rusk, head of the animal husbandry department, and Snapp will be two of the principal speakers on the program.

As a result of the rapid expansion in soybean acreage during recent years the question of the effects of the soybean crop on the Illinois has become one of the most debated questions of all time in soil management. In bulletin No. 456, "Soybeans—their effect on soil productivity," recently issued by the college of agriculture of the University of Illinois, O. H. Sears states that the method of handling this year's crop of 2,225,000 acres will determine its effect on the soil.

Because of the tendency of soybeans to improve the tilth of the soil we must take special precautions to prevent erosion, particularly on rolling land. "Best control of erosion on soybean fields is obtained by drilling them solid on the contour and following them with a winter cover crop of small grain also drilled on the contour," Sears states.

Unless part of the tops of the plants is returned to the soil either as straw or as green or livestock manure, the growing of soybeans will reduce the nitrogen content of the soil.

When the beans are combined and the straw is left in the field, there is an addition of 15 pounds of nitrogen to the acre. However, unless the soybeans are followed by a fall seeded crop, the losses of nitrogen by leaching may exceed the amounts added by the soybeans.

Used as a green manure, soybeans supply organic matter containing from 40 to 100 pounds of nitrogen to the acre, depending on the size of the crop and seasonal conditions.

Where soil erosion is no problem, spring seeded crops, corn and oats, do very well following soybeans.

Copies of the new bulletin, No. 456, may be obtained from your farm advisor or by writing the college of agriculture at Urbana.

Taking production records into consideration in the selection of dairy cows is particularly advantageous because ordinarily a person who is skillful in judging dairy cattle can not estimate productive capacity as closely as is desirable. Production records on Illinois dairy herds are kept by dairy herd improvement associations in cooperation with the extension service of the college of agriculture, University of Illinois.

Terraces not only save soil but are much less objectionable to cross than gullies.

Rubber tires have definitely found a place for themselves in modern power farming, it is indicated by R. I. Shawl, associate chief in agricultural engineering at the University of Illinois.

Since their introduction in 1932, the use of rubber tires on farm implements, especially tractors, has greatly increased.

In 1935, 14 per cent of the tractors made were equipped with rubber tires while 75 per cent of the tractors rolling off of the production lines in 1939 will be better buys because of their rubber tires.

A tractor on rubber tires has 20 to 25 per cent more horse power available at the drawbar than one equipped with ordinary wheels. The same tractor will operate on about 25 per cent less fuel when doing heavy work with tires and will save about 14 to 17 per cent of the fuel doing all types of work.

Tires also save expensive repairs and lengthen the life of the tractor by reducing the shocks on working parts, provide greater comfort for the operator, permit higher road speeds going to and from fields or from farm to farm, and make possible hauling with a trailer, and crossing walks, roads and yards without injury to the surface.

Farm management records show that corn yields four to five bushels more an acre after clover is pastured than after clover is cut for hay.

An acre of good pasture will produce from 150 to 500 pounds of meat a year, giving the pasture a value of $7.50 to $25 a year when it is worth an acre only bringing $5 a hundred, says E. T. Robbins, livestock extension specialist of the U. of I. On the other hand, a pasture that is too small for the numbers of stock may produce no meat at all and barely keep the animals alive.

The average American family consumes more than half a ton of paper costing about $45 in a year.

Dates of the Illinois Farm Sports festival at the college of agriculture, University of Illinois, are September 1 and 2.

Plate Glass Expensive

The plate glass required for the protection of the extensive exhibits in Fields museum of natural history at Chicago is approximately 2,100,000 square feet, and represents a value of more than $1,250,000.

Tokyo Stores Cut Prices

To check the rising cost of living, haberdashers of Tokyo met and voluntarily reduced prices.

Enjoy Plenty of Hot Water—Always on Tap With an

AUTOMATIC GAS WATER HEATER

● Almost the best part of any summer sport or activity is the healthful, soothing, refreshing bath that follows. And an Automatic Gas Water Heater never lets you down—for just a turn of the tap brings you plenty of hot water . . . instantly . . . automatically . . . any time of day or night.

Take a trip from those who know, and investigate this low-cost, convenient hot water service now. Take advantage of our 90-Day Home Trial and start to enjoy hot water for bathing, washing dishes, cleaning, laundry and a hundred other household needs. You'll wonder how you ever got along without it!

THRIFTY TO OWN!
Ask about the special low automatic gas water heating rate for residential users.

MASTER PLUMBERS ARE ALSO FEATURING GAS WATER HEATERS NOW

PUBLIC SERVICE COMPANY OF NORTHERN ILLINOIS

105 E. Main Street, Barrington

READ ABOUT THIS GENEROUS OFFER:

We install a new Automatic Gas Water Heater in your home for only $1.50 down (up to 48 months to pay the balance) and give you a $5 allowance for your old side-arm heater, furnace coil or coal pot, plus a $10 allowance for installation. You can try it—enjoy it—for 90 days—then decide. *Limited Time Offer . . . Act Now!*

Now... 90-DAY HOME TRIAL!
