NOTES BROOK

The little pigs should be supp variety of feeds.

It is better to be an honest of one language than a liar in five

Replenish the stock of wood on the back porch. Do a little better the that—increase the pile.

Most shepherds believe that the lood that goes to maintain a long fat til should go into the body of the

The decrease of beef cattle from 1907 to 1908 was 1.492,731, and the present supply falls short of last year's total by 654,000.

The growing and harvesting of rape for seed is an industry worthy of at-tention in districts where the soil and climate are suitable

Be sure that the new hen house is located where the drainage is good, and not in a place where water will stand for any length of time

In winter as much variety should be

If the young pigs should show signs of looseness of the bowels, shut off all feed to the sow but dry oats for a day or two, and the trouble will usually disappear.

In economical pig feeding we must make the most of our grain feeds by mingling them with coarse cheap foods, thereby reducing the cost of the ration.

Egg-cating hens are usually hens that do not have sufficient meat diet. Give them plenty of ment scraps or bugs, worms and insects and they won't eat eggs

Be Kind to Sows.

If a sow heavy with pigs should stray into your yard, don't shoo' her with the hoe handle. Hetter shut her up and notify your neighbor. He'll thank you, and then besides one of your sows may break out some day. Hens turn their eggs twice every day. This is where many incubator people make a mistake. Incubator eggs should be handled just like the hen would handle them.

Mate your animals in breeding with reference to individual characteristics as well as known pedigrees. The pedi-gree alone will not always insure the greatest merit in the progeny

The Osler theory, modified, ought to apply to poultry; when a hen sees her grand-daughters running around and flauring on being mothers, too, it's about time to make a chicken siew.

Some farmers say they do not keep sheep because they are subject to dis-ease, which is a great misrake, be-cause properly cared for sheep have fewer aliments than any other farm animal.

There is more profit, considering the investment and time and feed re-quired, in a flock of sheep, than any other animals raised on a farm.

With caives, coits, pigs or any animals raised by hand, other feeds than nulk will be eaten in small amounts when the animals are from 20 to 30 days old

As a rule, the wiseat way of handling a buil that is inclined to be vi-cious is to hand him over to the butcher, as an animal of this class is over safe to trust.

"A size of in my votes." What is formed in the most of A good pasture for hogs is one which is tender and nutritious. Blue grass makes a good pasture during the spring and faft, fall. Rye and blue grass make a little winter pasture.

It has always been a mystery how any intelligent dairyman could see profit in topping of \$40 a year income from a special bred dairy cow in or-der to secure a scrub beef calf.
