WORKINGS OF CHILD'S MIND

Society Organized in England to Help Mystric Infants Living Government

There is in London, England, an organization known as the Child Study Society. Its objects are to study the mysterious workings of children's minds. During the past few years this association has been conducting an investigation of the minds of boys and what those English children like best and what they hate.

Nine thousand forms have been distributed to school children between three and thirteen years of age, and the results are now accumulated. Both boys and girls love "King of Hones" was an easy first favorite among boys and "Riddle of the Sphinx" was a common result for these preferences was "because I like to fall down."

After that skipping, for girls, came next, but the boys were strong for cricket and football and horses. In spite of rumors to the contrary, the girl domains the favorite toy with English dolls, dolls, dolls, and dolls. Boys' carriages, and their a doll horse. Boys, it seems, are much more fond of the dolls and, as yet, are not for engine, horse, bells and magic lanterns. Books are hardly ever mentioned. The reason given for children were often quiet. One child volunteered the statement that "games take one's mind off school work, and I do not like to be idle."

"What time is it, Grace?" asked "three o'clock from this little bed." "When time to sleep," Grace replied. "Yes, I don't think it is."

"Well, I'd look when I get up in the morning."

BOY MAKES NOTABLE RECORD

Earl Hoopling, 15-Year-Old Athlete of Lake, Raises Fifty Bushels of Corn on Rocky Soil

It remained for Earl Hoopling, a 15-year-old boy from Lake, Wis., to raise living three and a half bushels from one acre, to raise fifty bushels of corn on an acre of ground conceded to be the rockiest area of ground in the county.

"The ground is literally covered in broken stones. I had to pick them out of the corn bed," Earl Hoopling says, but that attempt is not to raise fifty bushels of corn smaller in size than a man's head.

The boy cultivated his acre according to instructions from the United States farm demonstration department.

He was assisted in his work by his mother, who had bought the plot from the ground in the homestead wagon and handed the money to the ground.

"I feared the contractor would be unfaithful and competent as any other farmer," says Earl Hoopling.

"The Boy, His God, His Implements and Corn He Raised."

animal would have been, possibly more successful, because of the size of the field, but the man has no fear in injuring the stalks during the winter.

Earl Hoopling has written his methods in a booklet, "The Best Way to Grow Corn." The booklet has been told graphically how he appeared to accomplish such results on apparently worthless land.

Incidentally it may be remarked that the letter is great exactly as the boy writes it. There was not an error in spelling, not in grammar, and the writing was beyond criticism. Which is the ablest handwriting that is found in the successful farmer.

"I planted my first corn in February with my father's farm team—Jack and Henry—breaking it

WINTER NIGHTS
When the winter morn dawns,
And the stars are mystic,
The white moonlight
In each biting breath of air.

When the winter morn dawns,
And the stars are mystic,
The white moonlight
In each biting breath of air.

When the winter morn dawns,
And the stars are mystic,
The white moonlight
In each biting breath of air.

TRADING KNIVES IS HIS FAD

ANGORA GOATS VALUABLE AS PASTURE SCAVENGERS

One Animal to Acre Will Keep Drifts, Weeds and Bushes Completely Subdued on Land That Is Inclosed and Grows Up to Wood.

When the winter morn dawns, and the stars are mystic, the white moonlight in each biting breath of air, the angora goat is a most valuable animal to have on a farm. It is especially valuable as a pasture scavenger, and its presence on a farm is a great benefit to the farmer. The goat will eat up all the weeds and brush that are in the pasture, and it will also eat up the drifts and snow that are in the woods. This is a very valuable service, and it is one that should be taken advantage of by every farmer who has a pasture or woods on his farm.

My experience with the Angora goat for the past five years has proved that one goat to the acre will keep the pasture clean and free of weeds and brush. The goat will also eat up all the drifts and snow that are in the woods. This is a very valuable service, and it is one that should be taken advantage of by every farmer who has a pasture or woods on his farm.

FRUIT TREE PLANTING POINTS

Should be Placed in Grained With Drains to Prevent Frost Damage. With Waste Water Enough to Sprinkle Trees.

It is very important to place fruit trees in the right places on a farm. The trees should be planted in rows, and there should be drains between the rows to prevent frost damage. The drains should be made of gravel or broken stones, and they should be filled with water from the waste water of the farm. This will keep the trees warm and free of frost damage.

Best Lubricant for Machinery.

When the pressure is heavy the best lubricant is one that is easy to clean up. It should be one that will not get on the hands, and it should be one that will not stain the clothes. The best lubricant for machinery is one that meets these requirements.

Reaches on Grape Vines.

It is very important to protect grape vines from frost damage. The best way to do this is to cover the vines with a material that will keep them warm.

UNSUSPECTED WATER DANGERS

It is very important to protect your home from water damage. The best way to do this is to have a good drainage system. The drains should be made of gravel or broken stones, and they should be filled with water from the waste water of the house. This will keep the house dry and free of water damage.

STATE NEWS IN BRIEF

Missouri—One of the state judges criminally perjured in this case when burglar entered the house of J. H. Brown, a state judge, and stole valuable papers and other articles. The judge was sentenced to the penitentiary for three years and thirty days.
