HOLC Is Owner of Home; Expected to Assume Others

The Home Owners' Loan corporation, a federal agency created to assist distressed property owners during the depression period, became a full-fledged owner of one home in North Chicago this week and is expected to assume control of 60 more in the county within the next month.

A home in North Chicago became the property of the HOLC 14 months after it was sold at public auction following a foreclosure proceedings for non-payment of the \$1900 loan which Alex Wright had obtained from the HOLC.

At that time the federal agency claimed \$2200.25 was due on the loan. In addition to that claim, there was an item of \$74.01, expenses and fees incurred by the master in chancery for the sale of the property.

The sale was made to the HOLC and a receiver appointed for the property. The foreclosure proceedings against Wright was the first one started in Lake county

by the HOLC. The complaint was filed January 15, 1936. The loan was made on May 26, 1934.

GENTLEMEN, WE GIVE YOU THE MOST MODERN CHASSIS IN THE WORLD

NOW ON DISPLAY at BUICK Showrooms Everywhere

Under the new beauty of Buick, modern engineering makes history, co-starring the DYNAFLASH ENGINES and TORQUE-FREE SPRINGING

WHAT HAPPENS inside the 1938 Buick engine happens nowhere else in the world. This is not advertising language, it is cold-steel engineering fact.

TO MATCH this incomparable stride, Buick engineers now give you a kind of springing you will likewise find on no other car in the world.

Speeding through the raceways of the intake manifold, the fuel mixture vapor surges into the cylinders at speeds around 250 miles an hour.

As it sweeps past streamline valve contours, a scientifically designed Turbulator, built into the piston face, flings it into swirls of terrific turbulence.

The spark that leaps through that compact storm-center sets off a flashing cyclone of power, exploding with tornadoic force!

Sitting in the driver's seat you become aware of power that is livelier and more brilliant because gasoline is giving up more performance than it ever gave up to motorists before!

TO MATCH this incomparable stride, Buick engineers now give you a kind of springing you will likewise find on no other car in the world.

Poised on jarless coils of easy-flexing steel, Buick floats free of bobble, jar, chatter, jounce.

The car will not over-steer or under-steer—skidding, even on icy highways, is blessedly reduced.

Rear tires no longer scuff half their life away through power-wasting wheel-slip.

Through winter and summer, without need of grease and without "seize" from rust, dirt, water or ice, springs keep their gentle, even cushioning for the life of the car.

YES, IT IS a great story, the story of these twin engineering triumphs in the 1938 Buick.

So great a story that it obscures half a score of other advances, themselves enough to make any car a wonderful buy.

We invite you to learn more about them this week at any Buick showroom.

"Better buy Buick!"
