There is much said now about the value of corn fodder by those who advecate the use of the silo. It is true that the corn plant at maturity, exclusive of the ear, contains much valuable feed if properly harvested and

where the property narvested and yellow the three are few ways of more quickly killing the gold than to grow corn and remove all the crop by varing the fodder. It is good farm practice to cut up it is good that the first property of the property of the food of the three three

is left gadly depleted of its bal-red chemical store of life-producing

an-ed rhemical store or inequality and colored and composed of water and carbon divaled, free compounds of the atmospher, does not remove much fertility from the soil. But the entire corn plant contains nitrogen, polassium and phosphorus which the soil can ill

apane.
These cornstalks should be allow to remain in the field and be plow under the following season to reto these vital elements and form a hugues.

Never cut fodder on poor or was land. Leaving the stalks in the fle regularly feeds the soil.

Arrange for Better Pastures.

Arrange to have better pasture for all of the animals this summer. Cat out sprouts, seed the pasture land, and build good fences before pasturing season opens. Easy money is made from gold pasture at the control of t

ages I finally decided that the Mason glass jars, in their various sizes, were, all things considered, about the most satisfactory that could be obt-ined for the retail trade.

the retail trade.

The glass itself, barring accidents, The glass itself, barring accidents, lanta no indefinite length of time and as the caps or covers are made of the they become discolored, or old looking, there are a number of preparations by which they can be very quickly and easily cleaned, so that they will look as bright as new. On this account these jars, after be-ig emptied, represent, or are worth bout as much money as when new-
