See the "PEEN" in the "Spring"!
ONE little thing will illustrate the unsparring care we're spending to make this 1940 Buick take the car we've ever built.
The best springs — not simply the best soft-action springs — are that cushion the car, but even the valve springs.

After they're shaped and tempered and finished there's likely to be just a trace and a tiny scratch on the surface of the steel.
"Disappearance band" inspection (100% inspection) and maintenance.
We do that still, but now we do more. On special machines we electrically balance this great engine to microscopic precision after assembly, paying metal if need to be "rough."

Such a scratch conceivably might start a fracture. So we shut-about our springs — to heat such tiny imperfections, "peen" the surface in miniature like hammered steel.
When the experimental models had done their stuff on the General Motors proving ground, we turned 'em over to shaftprotestors to punch, over thousands of miles of bad roads and good.
Of it all comes an automobile we're mighty proud to offer — an unbeatable tranelavate you will be thrilled to own.
Come drive it — see how exactly close steel and rubber and glass come to being alive!
